## Education

**Ege University,** Computer Programming - *Associate Degree*

September 2018 - June 2020

## Projects

### Music Streaming Service

A basic spotify like service written in Javascript. Used JavaScript, SCSS and Bootstrap 4 for front-end, ExpressJS, Mongoose and NodeJS for back-end. Also learned JavaScript fundamentals & Node ecosystem with this project.

Live Preview    Client Source    API Source

### Arcus (WIP)

A native mod manager for Linux built with Electron. Although Arcus is far from done, learned a lot about advantages and disadvantages of Electron and further improved my skills in Javascript and programming in general.

Source

### Car Calendar

This is an app that developed for a Rent a Car business. User selects a date from calendar, adds a car and app pushes notification one day before the selected date at 9 PM. Made with React Native.
